FUCHS Industrial Lubricants

Lubricants for energy generation and energy transfer

Turbine oils
Air compressor oils
For more than 80 years, we have been concentrating all our activities and research efforts on the development of innovative lubricants. This specialization means that we are enjoying continuous growth – geographically, technically and in the number of application areas.

Today, FUCHS is a company that offers powerful lubricants and associated specialties worldwide in practically all areas of application and industries.
What makes our products more valuable.

We develop lubricants on an application-specific basis and tailored to our partners’ processes. Together, we look for the best lubricant for our customers. This type of collaboration is unique in its form, scope and intensity. We call it a development partnership. This ability is based on one key feature: As a true lubricant specialist with its headquarters in Mannheim/Germany, we are the largest independent lubricant specialist, and this independence makes all the difference. We are open to new methods and visionary approaches – a prerequisite for innovations. And innovations are a FUCHS trademark.

Together, we move more.
The global demand for energy continues to increase. Apart from the building of new power stations, an ever greater emphasis is also being placed on increasing the efficiency of energy production. The use of new technologies in power stations and the increasing efficiency and performance of gas and steam turbines is placing greater demands on the performance of the lubricants used in these applications. Significantly lower oil volumes for higher-performance turbines along with the use of oil circuits in combined cycle gas and steam turbines require long-life turbine oils which display, among others, outstanding thermal oxidation stability and excellent water and air release properties. FUCHS has developed the RENOLIN ETerna series and RENOLIN ETerna SGV series to meet the demands of such machinery as well as highly-stressed gearboxes.
The demands on air compressor oils.

These days compressed air is an important energy transfer medium in a number of technical application areas. The reliable generation of compressed air is of crucial importance to many users and as a result, air compressors are vital equipment in many industrial areas.

As short life or breakdowns can lead to production stoppages, the use of the right lubricant is a prerequisite for the reliable and efficient operation of plant and machinery. In recent years, compressed air generation has been optimised and as a result, greater demands are now placed on air compressor oils.

Operators expect long machinery service intervals and thus also longer life of compressor lubricants. But not just oil change intervals were extended; oil temperatures have risen along with the reduction in oil volumes.

To safely satisfy these demands, FUCHS developed special RENOLIN air compressor oils and subjected them to the severest of practical trials.

FUCHS Industrial Lubricants

High-tech turbine oils of the highest quality.

RENOLIN ETERNA

The RENOLIN ETERNA series was developed to satisfy the increasing demands of today’s turbine oils and to facilitate a degree of rationalisation in gas and steam plants. These oils were also formulated for use in plants which integrate highly-stressed gearboxes.

RENOLIN ETERNA series products are perfect for use in gas, steam and expansion turbines as well as turbo-compressors with or without gearboxes. In addition, they can also be used as bearing and sealing oils in hydrogen-cooled generators and as mineral oil-based control fluids in the hydraulic control circuits of turbine plants.

The objective of our development of RENOLIN ETERNA turbine oils was to offer our customers excellent (EP/AW) wear protection, good ageing stability and minimal sludge and deposit-forming tendencies.

They are based on the very latest lubricant technology, containing premium, hydrogenated base oils. The outstanding properties of these base oils are further improved by the inclusion of carefully-selected additives. RENOLIN ETERNA products are free of organometallic compounds and are therefore zinc- and ash-free. RENOLIN ETERNA offers excellent corrosion protection.

Benefits

- Outstanding thermal oxidation stability. RENOLIN ETERNA achieves excellent life of >10,000 hours in TOST test according to ISO 4263 (see Figure 1) as well as RPVOT test >1,000 minutes according to ASTMD-2272 (see Figure 2).
- Good viscosity-temperature behaviour. RENOLIN ETERNA oils have high, shear-stable, natural Viscosity Index (VI >130).
- Rapid air release: Air release <4 minutes.
- Approved by important OEM’s (e.g. SIEMENS, MAN Turbo, ALSTOM).
- Low foaming: Seq. I at +24.5°C = 30/0.
- Low pourpoint: -15°C.
- Good wear protection: FZG A/8, 3/90, damage load stage >10.
- Excellent water release after steam treatment: <50 seconds.
- Low sludging and deposit-forming tendency.
- Prevention of „Varnish“ due to excellent ageing stability.

**Poor thermal stability**  
Significant deposits

**Moderate thermal stability**  
Moderate deposits

**High thermal stability**  
No deposits

---

**MAN HT-Test**

RENOLIN ETERNA 32 meets and exceeds the requirements of the MAN HT test with excellent results. RENOLIN ETERNA is characterised by very good wear protection, high oxidation stability and excellent thermal stability.
Lubrication has a significant influence on the behaviour of compressors and their reliability. It is therefore vital that the right lubricant is selected to ensure reliable, economical and safe operation. FUCHS can offer you the best air compressor oil for your compressor and your specific application.

The principal functions of a compressor lubricant include:
- Lubrication of bearings
- Sealing (minimisation of reflux losses)
- Dissipation of heat
- Corrosion protection (ferrous and nonferrous metals)

To satisfy these requirements, high-performance air compressor oils must have the following characteristics:
- Outstanding oxidation and thermal stability
- Low evaporation and coking tendency
- Good demulsification
- Low foaming
- Good long-term viscosity-temperature behaviour
- Good air release
- High corrosion protection
- Excellent ageing stability

Temperature and ageing resistance (thermal and oxidation stability, evaporation and coking tendency) is of particular importance because of safety and long product life considerations.

In recent years, not only the market share of screw compressors has risen, but their performance has also increased. Such compressors today are not only smaller but also offer higher specific performance. Amongst others, this has placed greater demands on the lubricants used because the volumes of oil available for cooling and lubrication progressively decreases.

And to lower operating costs and to cut down-time for servicing, maintenance intervals have also been extended. Such extensions automatically lead to longer oil change intervals. These and higher air-outlet temperatures are further loads on the compressor oils. Many compressor plants these days are operated with air-outlet temperatures of >110°C compared to +75°C to +85°C in the past.

* The mentioned oil change intervals are guidelines and refer to normally-stressed industrial compressed air in European ambient temperatures between +10°C and +30°C. At higher temperatures and polluted atmospheres (waste dumps, water purification plants, chemical industry, etc.), the oil change intervals must be adjusted to prevailing conditions.

Thermal stability/Formation of deposits (FUCHS In-house test)

FUCHS Industrial Lubricants

Air compressor oils in practice.

FUCHS always offers you the right fluid for your screw compressor.

**RENOLIN SC series**

Premium-quality, oxidation- and ageing-resistant special cuts with corrosion protection and Anti-Wear additives. Available in the ISO viscosity grades 32, 46 and 68.

**RENOLIN SC MC series**

Screw compressor oils based on MC oils with a high, natural Viscosity Index for extended oil change intervals. Available in the ISO viscosity grades 46 and 68.

**RENOLIN COOL +**

Special screw compressor oil based on Group III oils with a high, natural Viscosity Index for extended oil change intervals even when subject to high thermal stresses (kinematic Viscosity at +40°C = 50 mm²/s).

**RENOLIN SYNAIR 46**

High-performance synthetic air compressor fluid with excellent biodegradability OECD 301C >60%.

**RENOLIN UNISYN OL series**

Fully-synthetic screw compressor oils based on PAO with a high, natural Viscosity Index for extended oil change intervals even when subject to high thermal stresses. Available in the ISO viscosity grades 32, 46 and 68.

High-temperature test in an ALMIG SCK 15 screw compressor
Power P(el) 11 kW/oil volume: 5 litres

Median compressor temperature: 120.5°C

Viscosity at +40 °C = No increase
IR ageing = Stable
Neutralization number = Stable

Figure 5: Screw compressor high-temperature test
Air compressor oils for turbo-compressors and oil-free compressors (oil-free pressure chambers).

**RENOLIN 200 series**

Special cuts with good ageing resistance as circulating oils for turbo-compressors and oil-free compressors if compatible with the compressor manufacturer’s lubricant recommendations.

**RENOLIN ETERNA series**

Turbine oils based on Group III oils with high ageing resistance and excellent wear protection for use as circulating oils in turbo-compressors and oil-free compressors if compatible with the compressor manufacturer’s lubricant recommendations. (ISO VG 32, 46 and 68)

**RENOLIN ETERNA SGV series**

High quality gas and steam turbine oils based on Group III oils with high thermal stability and good viscosity-temperature-behaviour. For use in steam and gas turbines without gearboxes. Especially suited for the compression of synthesis gas and ammonia. (ISO VG 32 and 46)

Air compressor oils for vane type and piston compressors complying with DIN 51 506.

The general desire to extend oil change intervals also applies to piston and rotary compressors. In these cases, the compressed air-outlet temperatures have remained high but extended oil change intervals means that the oil remains in the compressor for longer and this represents a product formulation challenge. The still-frequently used HD monograde oils can no longer offer the necessary performance and special oils are necessary which generally have to fulfil the requirements of VDL oils according to DIN 51 506. Here again, FUCHS offers the following high-performance oils:

**RENOLIN 200 series**

Special mineral oil cuts with good ageing resistance for all air compressors for which VB/VC oils according to DIN 51 506 are specified, for turbo-compressors and as circulation oils if compatible with the compressor manufacturer’s lubricant recommendations. (208 ~ ISO VG 100 / 210 ~ ISO VG 150 / 212 ~ ISO VG 220 / 213 ~ ISO VG 320)

**RENOLIN 500 series**

Highly ageing-stable mineral oils with ash-free anti-wear additives for thermally-stressed air compressors for which VCL/VDL oils according to DIN 51 506 are specified. (503 ~ ISO VG 68 / 504 ~ ISO VG 100 / 505 ~ ISO VG 150)

**RENOLIN VDL DD series**

Highly ageing-stable mineral oils with ash-free anti-wear additives and DD (Dispersant-Detergent) agents with powerful cleansing and good dirt transportation properties for highly-stressed air compressors for which VCL/VDL oils according to DIN 51 506 are specified. (VDL 100 DD ~ ISO VG 100 / VDL 150 DD ~ ISO VG 150)

**RENOLIN UNISYN OL series**

Fully-synthetic air compressor fluids based on PAO with a high, natural Viscosity Index for extended oil change intervals even when subject to high thermal stresses and for compressors for which VCL/VDL oils according to DIN 51 506 are specified. (ISO VG 68, 100, 150)

**RENOLIN SE 100**

Synthetic air compressor lubricant based on advanced synthetic ester technology. Highly resistant to oxidation and low affinity to coking (carbon deposits). Extended air drain intervals (ISO VG 100).

FUCHS Industrial Lubricants

Innovative lubricants need experienced application engineers

Every lubricant change should be preceded by expert consultation on the application in question. Only then the best lubricant system can be selected. Experienced FUCHS engineers will be glad to advise on products for the application in question and also on our full range of lubricants.
